                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                element (HRE) binding molecules or antisense nucleic acid molecules and SUMO-1 binding molecules or antisense molecules are useful for treating subject having or at risk of developing haematologic malignancy or MDE (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The invention is used in gene therapy. The present sequence is an antisense oligo targetted to HRE in the mdrl gene (mdrl-HRE) to inhibit its expression. This oligo is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; haematologic malignancy; multidrug resistance; MDR; SUMO-1; hypoxia inducible factor-1; small ubiquitin-like-modifier; HIF-1; lymphoid disorder; chronic lymphoproliferative disorder; lymphoma; myeloid disorder; lymphocytic leukaemia; thrombocythaemia; myeloma; angiogenic myeloid metaplasia; myeloid leukaemia; gene therapy; polycythaemia vera; hypoxia responsive element; HRE; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method of treating a subject having or at of developing a haematologic malignancy or multidrug resistance (MDR The method involves administering hypoxia inducible factor 1 (HIF-1)
                                       Treating a subject (at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The method involves administering hypoxia inducible factor-1 (HIF-1) binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or HIF-1-SUMO-1 complex modulators. mdr1-hypoxia responsive

multidrug resistance, e.g. lymphoma

hypoxia.

The present invention relates to a standardized polynucleotide system, which comprises at least one carrier nucleic acid, at least 3 oligonucleotides, as primers and target-gecific, fluorescently labeled probe and optionally at least one set of stabilized controls (standard RNA or DNA) of known concentration and instructions. The system comprise any of 20 sets of one control, two primers and one target-specific probe

The method involves administering hypoxia inducible factor-1 (HIF-1) binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or antisense modulators. mdr1-hypoxia responsive element (HRE) binding molecules or antisense molecules are useful for treating a subject having or at risk of developing haematologic malignancy or MDR (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphorytic leukaemia or chronic lymphopoiliferative disorders e.g. lymphoma, myeloma or chronic lymphoid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The invention is used in gene therapy. The present sequence is human mdr1

The present sequence is a polynucleotide used in the system of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 594 BP; 170 A; 125 C; 131 G; 0 T; 168 U; 0 Other;
                                                                                                                                                                                                                                                                      This gene is used as an example of a target DNA in a method for the amplification of nucleic acid sequences in a mixture using various DNA probes/primers. The method may be used to detect a mutation or allele ithe target, e.g. that that causes a genetic disease. (Updated on 25-MAI 2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Enzymatic amplification of target nucleic acid sequences in a mixt. detect a mutation or allele in the target, e.g. that causes a genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Multidrug-resistance; MDR-1 gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Multidrug-resistance gene MDR-1.

                                                                                                                                                                                                                                                                                                                                                                                                                           Enzymatic amplification of target nucleic acid sequences to form exact or modified copies - has increased fidelity and can identify point mutations or allele(\epsilon).
                                                                                                                                                                                                                                                                                                                                            This gene is used as an example of a target DNA in a method for the amplification of nucleic acid sequences in a mixture using various DNA probes/primers. The method may be used to detect a mutation or allele the target, e.g. that that causes a genetic disease. (Opdated on 25-MA) 2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              27-JAN-1993;

This sequence can be used CC as a target nucleic acid (TNA) sequence contained in a nucleic acid or CC mixture of nucleic acid (TNA) sequence contained in a nucleic acid or CC mixture of nucleic acids while avoiding strand displacement by CC polymerase. The method comprises using three primers, one complementary. CC to a first segment of the TNA, as second complementary to a second segment composition of the first primer. The first primer, and a third which is similar to the first primer. The first two primers are hybridised to the CC TNA, and a fused amplification product is created from the TNA using these two primers. The fused product is dissociated, and hybridised to the third primer, which is then extended. The extended modified CC these two primers are ligated. Each of the primers may be labelled using a CC third primer are ligated. Each of the primers may be labelled using a CC different label so that the method can be used to detect the presence of amplification product. The method of the labelled primer is CC contained within the fused amplification product or the extended camplification product. The method of the labelled primer is contained within the fused amplification product or the extended camplification product. The method of the labelled primer is contained within the fused amplification product or the extended compares of the primers meeded, and the fact that the entire TNA sequence does not need to be contained and the fact that the entire TNA sequence does not need to be contained and the fact that the entire TNA sequence does not need to be contained and the fact that the entire TNA sequence does not need to be contained within the fact that the entire TNA sequence does not need to be contained to the fact that the entire TNA sequence does not need to the fact that the entire TNA sequence does not need to the fact that the entire TNA sequence that the sequence does no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

At least part of one strand (as1) of dsRNA1 is complementary to (I) and at least one end of dsRNA1 has an overhang of 1-4 nucleotides. The method is used to inhibit the expression of a wide range of genes, e.g. oncogenes, cytokine genes etc. in humans, also genes in plasmodium or in viruses or viroids that are pathogenic for humans, animals or plants. Introducing an overhang into dsRNA greatly increases effectiveness for inhibiting gene expression, both in vivo and in vitro and also increases stability and thus the effective concentration inside the cell. The present sequence is that of

At least part of one strand (S1, S2) of the ds structures in each CC of dsRNAI and II are complementary to regions in the target gene. The CC method uses antisense inhibition of gene expression using double stranded CC RNA inhibition (RNAi). The method is particularly used to treat tumours CC or infections, especially by Plasmodium or viruses/viroids (pathogenic on CC of expression than known methods using a single dsRNA, even at very low CC concentrations. When dsRNA has at least one unpaired nucleotide at the CC end, stability (and thus effective concentration in the cell) is improved and efficiency can be increased further by pretreating the cells with CCC interferon. The present sequence is that of a target DNA of the invention very
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

This invention describes a novel method for inhibiting expression of a target gene by introducing into the cell that contains the target gene at least one oligoribonucleotide (dsRNAI) that has a double-stranded (ds) structure of not more than 49 consecutive nucleotides (nt), where at least a segment of one strand of the ds structure is complementary with the target gene and the cells are treatted with interferon before introduction of dsRNAI. The method is used to inhibit expression of target genes, particularly oncogenes, cytokine genes, id (not defined) protein genes, developmental or prion genes, or genes expressed in pathogenic organisms (particularly plasmodia) or in viruses or viroids (pathogenic in humans, animals or plants). Treating the cells with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Oligoribonucleotide; interferon; oncogene; cytokine; Id; developmental; prion; inhibition; human; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ABX09965 standard; DNA; 3840

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   interferon greatly increases the extent to which dsRNA can inhibit expression of the target genes, and the effect is even greater when dsRNA are modified to increase their stability. ABX09936-ABX10075 represent gene fragments used to illustrate the method of the invention
                                                   The invention relates to a method for inhibiting expression of a target gene (ABL91658-ABL91797) in a cell by introducing at least one oligoribonucleotide that has a double-stranded structure consisting of at most 49 sequential nucleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single-stranded segment of 1-4 nt. The method provides oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating tumours but the oligoribonucleotides may also be directed against genes present in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against cytokine, Id, developmental or prion genes. The method provides more effective inhibition of gene expression than use of known oligonucleotides, probably because the unpaired overhang increases stability and thus intracellular concentration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; HIV; HCV; gene expression; oligoribonucleotide; tumour; pathogen; plasmodium; virus; viroid; cytokine; prion; antisense oligonucleotide; cytostatic; virucide; protozoacide; antibacterial; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to presumption of the side effect of at least one immunosuppressant selected from tacrolimus and cyclosporin in which if the 2677th base in the position of MDR1 gene in the encoding region of the cDNA sequence is guanine, adenine or thymine, is investigated. The method is used for the presumption of the side effect of an immunosuppressant. The present sequence is that of the MDR1 encoding cDNA of the invention
                                 Human wild-type multidrug resistance-1 (MDR-1) cDNA.

resistance protein MDR-1 MDR-1 is a transmembrane efflux pump, cresponsible for the export of drugs from cells, particularly cancer cells. Wild-type MDR-1 shows increased resistance to etoposide and decreased resistance to etoposide and convertion relates to transducing haematopoietic stem cells with nucleic acid encoding an MDR protein and culturing the modified cells. The modified haematopoietic stem cells are useful in bone marrow transplantation (to reconstitute haematopoietic systems in patients who therapy of genetic defects in cells derived from haematopoietic stem cells are useful and in ex vivo gene therapy of genetic defects in cells derived from haematopoietic stem cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or leukaemia. The modified cells can also be used to identify factors involved in regulating proliferation and differentiation in haematopoietic stem cells that express MDR-1 haematopoietic stem cells that express MDR-1 will be provided and the contrafted cells.
will be protected against chemotherapeutic agents, so can be engrafted while the patient is undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells provides sufficient cells to permit standard biochemical analysis. Overexpression of MDR-1 allows cytokine-driven expansion of haematopoietic stem cells by at least 10-fold compared with a maximum of 4-fold in known procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO9961589-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CDS

                                                                                                                                                                           CC resistance protein MDR-1, where the the Gly residue at postion 185 of the cefflux pump, responsible for the export of drugs from cells, particularly CC cancer cells. The wild-type MDR-1 shows increased resistance to etoposide and decreased resistance to vinca alkaloids compared with the G185V CC mutant. The invention relates to transducing haematopoietic stem cells CC with nucleic acid encoding an MDR protein and culturing the modified with the G185V CC cells. The modified haematopoietic stem cells are useful in bone marrow CC transplantation (to reconstitute haematopoietic systems in patients who CC have undergone chemotherapy or radiation therapy) and in ex vivo gene CC cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or CC leukaemia. The modified cells can also be used to identify factors CC involved in regulating proliferation and differentiation in haematopoietic stem cells that express MDR-1 CC will be protected against chemotherapeutic agents, so can be engrafted CC while the patient is undergoing chemotherapy. Expansion of (rare) thaematopoietic stem cells that express MDR-1 CC manatopoietic stem cells to permit standard CC biochemical analysis. Overexpression of MDR-1 allows cytokine-driven cCC expansion of haematopoietic stem cells by at least 10-fold compared with cc a maximum of 4-fold in known procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 13

Haematopoietic cells can be used in bone marrow transplants (e.g., for treatment of leukemia) and for ex vivo gene therapy for treating blood diseases such as sickle cell anemia and thalassemia. The stem cells can also be used as cell targets in gene therapy protocols. The present sequence represents a sequence related to the BCRP for which no relevant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Stem cell; ATP transport protein; ATP-binding cassette; antiparkinsonian; hepatotropic; neurodegenerative; cytostatic; antianemic; muscular; BCRP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human BCRP DNA related seq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26-MAR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABA94365
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides a method of identifying and/or isolating a ste-
cell that involves detecting the expression of an ATP transport protection on the provided and the containing a conserved ATP-binding cassette (BCRP) by a cell in a san comprising stem cells. The isolated stem cells may be used in the treatment of diseases such as muscular dystrophy, degenerative liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying a stem cell, for treating e.g., muscular dystrophy, myocardial infarction, Parkinson's disease, or neurodegenerative disorders, comprises detecting the expression of an ATP transport protein (BCRP) by a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              31-MAY-2000;

                                                                                                                                                                                                                                                                                                                                                     The invention provides a method of identifying and/or isolating a stem cell that involves detecting the expression of an ATP transport protein containing a conserved ATP-binding cassette (BCRP) by a cell in a sample comprising stem cells. The isolated stem cells may be used in the treatment of diseases such as muscular dystrophy, degenerative liver disorder, myocardial infarction, Parkinson's disease, degenerative disorders of the brain, and for tissue regeneration or replacement. Haematopoietic cells can be used in bone marrow transplants (e.g., for treatment of leukemia) and for ex vivo gene therapy for treating blood diseases such as sickle cell anemia and thalassemia. The stem cells can also be used as cell targets in gene therapy protocols. The present seguence represents a seguence related to the BCRP for which no relevant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying a stem cell, for treating e.g., muscular dystrophy, myocardial infarction, Parkinson's disease, or neurodegenerative disorders, comprises detecting the expression of an ATP transport protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    was constructed using the Lambda Zap Express/Gigapack cloning kit (Stratagene cloning systems). cDNA synthesis was carried out using an oligo-(dT) primer for the reverse transcription of 5ug of mRNA and the library was constructed by directional cloning EcoR1-Xho1 based on manufacturers instructions. An insert:vector ligation ratio of 1:5 was chosen as most optimum. The lambda library was packaged with Gigapack III gold packaging extracts and plated on the E. coli cell line XLI-Blue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note="Organ: ovary; Vector: Lambda ZAP Express; Site 1:
